

SUDOKU WEEKLY

Week 32, 2020

www.jvank.nl/Sudokus

Explanation

The solution to a sudoku is a special kind of **magic square**: In each row and in each column the entries add to the same number, in this case, 45.

Only the digits 1,2,3,4,5,6,7,8 and 9 may be used and all nine digits have to appear on each row and in each column. In addition, each of the nine 3×3 blocks that make up the sudoku should also contain these nine digits.

The sudoku itself is a puzzle in which only a few of the digits are given. To solve the puzzle, all missing digits should be reconstructed. A proper sudoku is designed in such a way that it has only one unique solution.

This booklet contains only a special brand of Sudokus named **magic sudokus**. In this type, each puzzle contains one or more gray blocks. These small blocks have a property similar to the sudoku in which they occur: Each row and each column adds to 15 and all nine digits should be present in the block.
